

Cable Internet vs. IPFone High-Speed Internet

Cable

Cable shares your connection with many other users, causing common slowdowns.

Cable companies provide a "best effort" service, which implies that they cannot guarantee uptime, performance, or throughput.

Cable has usage caps per-month limit on the total amount of data you can download and additional charges for extra usage.

Cable service does not offer symmetrical speeds.

You're just a number to them. The technical support line can be a horrible, frustrating experience.

Sharing a LAN with neighbors through cable companies can expose your computer and files without proper security measures.

No private point-to-point within locations is possible

Coax is consumer-grade.

IPFone High-Speed Internet

Get dedicated internet access with IPFone High-Speed Internet. No sharing with neighbors.

Choose IPFone High-Speed Internet for dependable and top-notch service that comes with a 99.99% SLA assurance.

IPFone High-Speed Internet service offers truly unlimited data with no hidden caps.

IPFone's High-Speed Internet service provides guaranteed symmetrical speeds.

Dedicated and local personnel. Also, 4-hour repair guarantee by SLA.

IPFone High-Speed Internet is entirely dedicated and private, making it more secure.

Secure point-to-point service within locations is available without extra cost.

Fiber is a business-class service.
